Sox9 and Nr5a1 (Sf1) bind the Amh gene

Imaimatsu, K., Kanai, Y., May, B.
Introduction

Reactome is open-source, open access, manually curated and peer-reviewed pathway database. Pathway annotations are authored by expert biologists, in collaboration with Reactome editorial staff and cross-referenced to many bioinformatics databases. A system of evidence tracking ensures that all assertions are backed up by the primary literature. Reactome is used by clinicians, geneticists, genomics researchers, and molecular biologists to interpret the results of high-throughput experimental studies, by bioinformaticians seeking to develop novel algorithms for mining knowledge from genomic studies, and by systems biologists building predictive models of normal and disease variant pathways.

The development of Reactome is supported by grants from the US National Institutes of Health (P41 HG003751), University of Toronto (CFREF Medicine by Design), European Union (EU STRP, EMI-CD), and the European Molecular Biology Laboratory (EBI Industry program).

Sox9 and Nr5a1 (SF1) bind the Amh gene

Stable identifier: R-MMU-9692157

Type: binding

Compartments: nucleoplasm

Sox9, Nr5a1 (SF1), and Gata4 bind the promoter of the Amh gene (Shen et al. 1994, Viger et al. 1998, Li et al. 2014, Rahmoun et al. 2017).
